

Current-state report – Visual Recovery Reference

Client: Emirates Paints
Production website: <https://emiratespaints.com/>
Capture window (UTC): 2026-09-02T14:22:16Z → 2026-09-03T00:32:42Z
Report generated (UTC): 2026-09-03T01:52:50Z
Tool: vrr 1.0.0, Playwright 1.62.0, chromium 151.0.7922.34, Linux 5.15.200 (x86_64)

This Visual Recovery Reference records the publicly visible state of the website during the stated capture period. It is intended to support visual and public-functionality comparison following recovery. It does not constitute a complete WordPress source-code, database or application backup, and it does not independently prove that the underlying website was secure or fully functional at the time of capture.

1. Scope

All publicly accessible first-party HTML pages and linked public documents on `emiratespaints.com`, `www.emiratespaints.com` discovered passively from the homepage, navigation, footer, `robots.txt`, XML sitemap(s) and internal links. Administrative, authenticated, cart/checkout, feed and state-changing URLs were recorded in the manifest but excluded from capture (see `exceptions.md`).

2. Methodology

- Passive discovery of `robots.txt` and XML sitemaps only; HTML pages are never pre-fetched. Because a LiteSpeed cache MISS regenerates and stores the page from the current database, every production request is treated as potentially state-affecting: no preliminary, duplicate, HEAD, test or cache-bypass requests. 1b. Each URL receives exactly one controlled browser navigation (ordinary Chrome user agent). Headers, body, redirect chain, rendered HTML and screenshots all come from that first response; tablet/mobile views are produced by resizing the loaded page. New same-domain links found in the rendered page are queued for their own single visit. A MISS or unexpected design is preserved and flagged, never reloaded.
- Each HTML page rendered in a fresh, unauthenticated headless Chromium context at three viewports (desktop 1440×900, tablet 768×1024, mobile 390×844, DPR 1).
- Per page and viewport: above-the-fold PNG, stepwise scroll for lazy-loaded media, return to top, full-page PNG, original response HTML, rendered DOM HTML, response headers, redirect chain, page metadata (title, description, canonical, Open Graph, JSON-LD, links, forms, iframes), first-party assets (deduplicated).
- Safe interactive states captured where present: mobile menu, search panel, navigation hover, cookie banner (initial state first).
- Rate limiting: concurrency 1, 2.5s delay, 2 retries with backoff, hard stop on HTTP 429 or 3 consecutive 5xx.
- Automated QA (blank/short/duplicate screenshots via perceptual hash, viewport coverage, broken images, error text, title/URL sanity) followed by SHA-256 hashing of every evidence file.

3. Coverage statistics

Metric	Value
URLs discovered (manifest rows)	1286
HTML pages in scope	609
HTML pages fully captured (3 viewports)	609
Partially captured	0
Failed / not captured	0
Public documents discovered / archived	46 / 46
Excluded (out of scope)	567
Total production requests logged (all purposes)	741
Evidence files hashed	10983 (2101.1 MB)

Language coverage

- en-US : 606 pages
- en : 2 pages
- und : 1 pages

Viewport coverage

- desktop: 609 / 609 pages
- tablet: 609 / 609 pages
- mobile: 609 / 609 pages

4. Cache observations

See `cache-observations.md`. Summary: 45 pages served with a disclosed cache HIT, 535 with a MISS, 75 without a disclosed status. Apparent technology: LiteSpeed Cache (x-litespeed-*).

Observed fact: the large MISS share means most captured pages were generated by the WordPress backend at capture time rather than served from an existing cache. Every HIT and every MISS response referenced the same theme files (`yobazar`, `yobazar-child`), so no visual/theme divergence between cached and freshly generated pages was observed in this capture. Whether an ordinary visit stored a regenerated page in the cache cannot be determined from the client side; it is disclosed as a possibility, not a finding.

Request accounting (LiteSpeed sensitivity)

Every request made to a production URL is listed per row in `url-manifest.json` → `requests[]` (time, method, HTTP status, `x-litespeed-cache`, purpose).

- URLs captured with exactly one request: 597
- URLs with one earlier discovery GET (made on 2026-09-02 before the single-request rule was adopted) plus one capture navigation: 52
- URLs with 3+ requests (pilot pages navigated per viewport, retries after no response, or the two interrupted-run rows P0149/P0715): 6
- No HEAD, cache-bypass, cache-busting or deliberate reload requests were issued at any point.

5. Current visible defects and observations (not fixed – recorded as-is)

- **LAYOUT_COLLAPSE** P0002: mobile page height 878px is far shorter than desktop 2480px - content may be missing at the mobile viewport
- **BLANK_IMAGE** P0010: screenshots/desktop/above-fold/P0010_brochures_und_desktop_fold.png: near-uniform image (stddev 0.0)
- **BLANK_IMAGE** P0010: screenshots/desktop/full-page/P0010_brochures_und_desktop_full.png: near-uniform image (stddev 0.0)
- **BLANK_IMAGE** P0010: screenshots/tablet/above-fold/P0010_brochures_und_tablet_fold.png: near-uniform image (stddev 0.0)
- **BLANK_IMAGE** P0010: screenshots/tablet/full-page/P0010_brochures_und_tablet_full.png: near-uniform image (stddev 0.0)
- **BLANK_IMAGE** P0010: screenshots/mobile/above-fold/P0010_brochures_und_mobile_fold.png: near-uniform image (stddev 0.0)
- **BLANK_IMAGE** P0010: screenshots/mobile/full-page/P0010_brochures_und_mobile_full.png: near-uniform image (stddev 0.0)
- **HTTP_ERROR** P0016: desktop: HTTP 404
- **BROKEN_IMAGES** P0016: desktop: 1 broken element(s)
- **HTTP_ERROR** P0016: tablet: HTTP 404
- **BROKEN_IMAGES** P0016: tablet: 1 broken element(s)
- **HTTP_ERROR** P0016: mobile: HTTP 404
- **BROKEN_IMAGES** P0016: mobile: 1 broken element(s)
- **LAYOUT_COLLAPSE** P0018: mobile page height 879px is far shorter than desktop 2493px - content may be missing at the mobile viewport
- **BROKEN_IMAGES** P0020: mobile: 3 broken element(s)
- **LAYOUT_COLLAPSE** P0020: mobile page height 861px is far shorter than desktop 2445px - content may be missing at the mobile viewport
- **HTTP_ERROR** P0025: desktop: HTTP 404
- **BROKEN_IMAGES** P0025: desktop: 1 broken element(s)
- **HTTP_ERROR** P0025: tablet: HTTP 404
- **BROKEN_IMAGES** P0025: tablet: 1 broken element(s)
- **HTTP_ERROR** P0025: mobile: HTTP 404
- **BROKEN_IMAGES** P0025: mobile: 1 broken element(s)
- **LAYOUT_COLLAPSE** P0031: mobile page height 879px is far shorter than desktop 2528px - content may be missing at the mobile viewport
- **LAYOUT_COLLAPSE** P0032: mobile page height 879px is far shorter than desktop 2551px - content may be missing at the mobile viewport
- **LAYOUT_COLLAPSE** P0033: mobile page height 879px is far shorter than desktop 2575px - content may be missing at the mobile viewport
- **LAYOUT_COLLAPSE** P0034: mobile page height 879px is far shorter than desktop 2575px - content may be missing at the mobile viewport
- **LAYOUT_COLLAPSE** P0035: mobile page height 879px is far shorter than desktop 2551px - content may be missing at the mobile viewport
- **LAYOUT_COLLAPSE** P0037: mobile page height 879px is far shorter than desktop 2551px - content may be missing at the mobile viewport
- **LAYOUT_COLLAPSE** P0038: mobile page height 879px is far shorter than desktop 2551px - content may be missing at the mobile viewport
- **LAYOUT_COLLAPSE** P0039: mobile page height 879px is far shorter than desktop 2527px - content may be missing at the mobile viewport
- **LAYOUT_COLLAPSE** P0040: mobile page height 879px is far shorter than desktop 2503px - content may be missing at the mobile viewport
- **LAYOUT_COLLAPSE** P0041: mobile page height 879px is far shorter than desktop 2397px - content may be missing at the mobile viewport
- **LAYOUT_COLLAPSE** P0042: mobile page height 879px is far shorter than desktop 2397px - content may be missing at the mobile viewport
- **LAYOUT_COLLAPSE** P0047: mobile page height 879px is far shorter than desktop 2551px - content may be missing at the mobile viewport
- **LAYOUT_COLLAPSE** P0054: mobile page height 879px is far shorter than desktop 2575px - content may be missing at the mobile viewport

Full list (including low/info): `reports/crawl-coverage/qa-findings.json` (2585 findings).

6. Limitations

- Evidence reflects what a first-time, unauthenticated visitor using headless Chromium received during the capture window; other visitors, devices or cache nodes may have received different content.
- Visiting an uncached page causes the server-side cache to store the backend's current render (normal visitor behaviour). MISS pages therefore document the current backend output, not a pre-existing cached copy.
- Third-party resources, server-side functionality, form submission, account areas and checkout were deliberately not exercised or archived.
- Full-page screenshots taller than 16,000 px are clipped and noted in the manifest.
- Animated or time-dependent content (sliders, WhatsApp widget, social embeds, dates) may legitimately differ between captures; these areas should be masked in later automated comparisons via a separate mask configuration – no masks were applied to the evidence.
- This package is not a WordPress backup: no theme/plugin source, uploads directory or database content is included (see README).

7. Exceptions

665 entries – see `exceptions.md`.

8. Recommended client sign-off procedure

1. Open `reports/visual-contact-sheets/index.html` and review every page card (desktop/tablet/mobile).
2. Confirm that the captured appearance matches the website the client expects to recover; note any page that already looks wrong in the `Notes` column of `url-manifest.csv` (as a client observation, without altering evidence files).
3. Verify integrity with `sha256sum -c integrity/SHA256SUMS.txt` from the package root.
4. Sign the approval block in `executive-summary.pdf`; the signed PDF plus the SHA256SUMS file constitute the approved baseline.
5. Re-run the same configuration against staging/production after recovery (see `README.md` → Rerun) and compare screenshots per reference ID.
